CYBER LIGHT DISPENSER

Drugs light identification dispenser

Let your pharmacy
take flight towards easy and
smart automation

Modernise your pharmacy

Cyber Light Dispenser easily integrates into every pharmacy and it perfectly adapts to the existing layout

CYBER LIGHT DISPENSER

Guided Picking • machine front side

Needed medications list prepared through e-prescription registration or even through data manual input.

CLD identifies drugs to be picked thanks to Led-light. A specific light colour is assigned to every pharmacist, so that many pharmacists can pick products at the same time.

Touch screen

Panel controls and simplifies every activity.

Light guiding the pharmacist

Drugs picking identified and guided by Led-lights.

- ✓ **CLD replaces drawers**
- ✓ **Inventory in real time**
- ✓ **One color for every pharmacist.**
- ✓ **Picking and refilling achievable at the same time.**

Guided refilling • machine back side

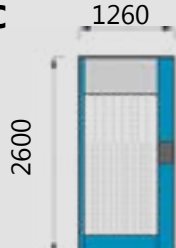

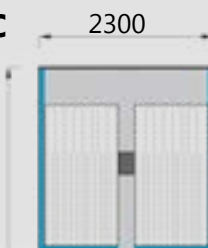

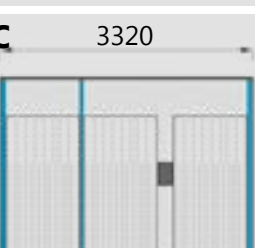

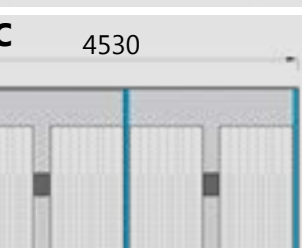

Drugs are quickly and safely introduced into the channels, thanks to «Stock to light Sentinel» technology, on the back side of the machine. Led lights guide the operator to the right drug location.

Take into account that picking and refilling can be carried out at the same time, without any interference.
